

3

When tantrum behaviors reach their max, we call that state dysregulation, because the higher functioning parts of the brain are basically off-line. Child is in a "flight-fight-freeze" state.

DYSREGULATION

ZONE

4

Hopefully children don't stay in that state of dysregulation for very long, and will naturally begin to calm down over time

Something triggers strong, upset feelings, after which tantrum behaviors begin and increase (we call this escalation.)

At first there's no tantrum, though perhaps there's some pre-disposition.

ESCALATION.

CALMING DOWN

Eventually, brain and body return to a 'baseline' state of normal... whatever that looks like for that individual child.

BACK TO NORMAL

TIME

THERE'S MORE!

## BEFORE TRIGGER

## **ESCALATION**

## DYSREGULATION ZONE

## **CALMING DOWN**

## BACK TO NORMAL

· Looks, acts, and reacts like

your normal kid.

- · Everything is OK, or
- Predisposed for trouble, ie: dinnertime, rough day, over-tired.

PREVENTION TECHNIQUES

exercise, nutrition, consistent

· Classic stuff like sleep.

routines, and clear &

· "Front-loading"

their best self.

consistent expectations

· Overall help the child to be

- Whining
- · Arguing
- · Yelling
- Physical tension in body builds
- Being "flooded"—brain isn't working.
- · Fight, flight or freeze
- Screaming
- Hitting
- Throwing

### SELF-MANAGEMENT & HEALTHY BOUNDARIES

- · Assure safety for living things.
- Keep or regain your own calm.
   If you aren't calm, take your own time out—staying present when you are upset only makes things worse.
- Be available to help your child regain their regulation, or manage their environment to help with this.
- Practice healthy emotional boundaries. Avoid: talking, lecturing, rationalizing, fixing, advising, debating, correcting, threatening. Verbal interventions unlikely to work.
- Some kids need more space from you during this time, some kids need you to be physically present, but generally without much talking or involvement.

- Quieter voices
- · Slower movements
- Hiding
- Physical "slump"

#### CIRCLE BACK

- An hour or a week later, you can circle back to address important things related to the incident.
- Most important: reconnect the relationship and repair.
   Apologize for your part.
- Teach. For example, you can talk about the healthy coping skills YOU use when you have a hard time, that your child might also find helpful.
- Reparation. Work with your child to identify something that you can do together to 'make right' in some way.
- Please note, you don't need to do all of these. Every situation doesn't need a lesson and/or reparation, and some kids will have to work hard to build the ability to tolerate more than a few seconds of a circle back conversation.

### **DE-ESCALATION TECHNIQUES**

- · Keep yourself calm.
- Send de-escalation signals: take deep, slow, quiet breaths. Check your physical posture—your body should be relaxed, and not too tall or too close to your child. Slow your physical movements. Reduce or stop talking.
- Put on your "Face of Compassion."
- Let your child be "seen and felt."

## 大井大

#### WAIT!

- If your child is de-escalating, LET THEM! Don't intervene and mess it up.
- Time passing is helpful in de-escalation. Avoid rushing into the circle-back phase.
- Look for a physical slump or relaxation.
- "Do you want a hug to help you with your feelings?"
- Remember, you might need this time, too. Check your own physical state before re-engaging, too.
